

## Nation Rise Wind Farm - Enquiries Register

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
1	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Council requested details concerning Nation Rise's commitment to keep an "issues register" (i.e. Who, what, when, where to be found, and how the information will be relayed to North Stormont residents) etc.				
<b>OUTCOME</b>				
EDPR will maintain an Enquiries Register which will be made available to the Township in the coming weeks. This Enquiries Register will provide the Council and public a list of questions received by EDPR and the associated response. If a question is asked by a member of the public that has already been addressed, EDPR will direct the individual to the response provided in the Enquiries Register. It's recommended that the public also review the Consultation Summary Report which was submitted as part of the REA process for a listing of the common questions and associated responses. This report can be found on the project webpage: <a href="http://www.nationrisewindfarm.com">www.nationrisewindfarm.com</a>				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
2	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Township requested a copy of the IESO contract with Nation Rise through Freedom of Information (FOI).				
<b>OUTCOME</b>				
EDPR was made aware of this FOI at the Township Council meeting and received further information from the IESO on the FOI request on May 15th. EDPR is submitting its response back to the IESO confirming the redaction of commercially sensitive information, such as the awarded contract price. The IESO will be responsible for closing out the FOI request and providing the contract to requesting parties. As discussed with Township staff, the contract was executed as a confidential document and EDPR does not have the authorization to distribute the contract, this contract can only be released by the IESO.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
3	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Council requested details on how residents that will be affected by Project activity can be "kept in the loop" regarding construction, road closures, etc. Council asked that Nation Rise provide a public "contact list" of the appropriate persons to call throughout the entire Project.				
<b>OUTCOME</b>				
As per Condition S1 - Municipal Consultation of Renewable Energy Approval 0871-AV3TFM, the company submitted a Traffic Management Plan to the Township of North Stormont in December 2018. This was later revised to reflect the comments provided by both the Township of North Stormont and the United Counties of Stormont, Dundas and Glengarry.				
EDPR will be providing a contact information sheet in hard copy form to the Township. These hard copies of contact information will be made available at the Township office for anyone who is not able to access the webpage. Any questions directly related to construction activities can currently be directed to the Nation Rise Wind Farm Construction Line at (613) 240-0348.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
4	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Council asked to know what the water turbidity parameters consist of. Council stated that previously, residents have requested this information and, in addition, some are still waiting to get their wells tested. Council requested that Nation Rise outline the appropriate process and contact person regarding wells in addition to providing the list of parameters that are being tested during the spring and fall.				
<b>OUTCOME</b>				
As per Condition I - Well Water Sampling of Renewable Energy Approval 0871-AV3TFM the company retained the services of DNV GL and BluMetric Environmental Inc. to conduct a water well sampling program of participating water wells within 1000m of a proposed foundation or water wells within the project area. The Turbidity analysis that is being completed is the industry standard for baseline well water quality assessment and was completed as specified in the Renewable Energy Approval (REA). Sampling teams have been collecting field measurements for Turbidity and also submitting samples to the Laboratory for Turbidity analysis. In general terms, Turbidity measures the "cloudiness" of the water caused by the presence of particles in the water. The cloudier the water, the greater the turbidity. It is measured in nephelometric turbidity units (NTUs). It indicates the amount of turbidity through a measurement of scattered light through a water sample.				
The first round of sampling occurred in Fall 2018. The summary report and MECP approval letter can be found on the project webpage: <a href="http://www.nationrisewindfarm.com">www.nationrisewindfarm.com</a> . The results of the lab analysis of the individual wells were shared with the landowner via e-mail or their preferred method of communication. Further testing is occurring on selected wells of participants from the previous investigation on a voluntary basis by the project to demonstrate seasonal changes in water samples. Please contact DNV GL below for further information or to request participation in the study.				
Anna Newton DNV GL Office Administrator, Environment and Permitting Services <a href="mailto:anna.newton@dnvgl.com">anna.newton@dnvgl.com</a>				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
5	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Council wanted to know how Nation Rise proposes to get information out to others (several residents in attendance at the meeting) on the process for getting responses to residents regarding questions raised and answered.				
<b>OUTCOME</b>				
EDPR will be publishing an Enquiries Register to supplement the Consultation Summary Report currently held on the project website in regards to questions raised. As per the discussion at the last Council meeting, EDPR will be providing a contact information sheet in hard copy form to the Township for those who can't access the information online. These hard copies of the contact information will be made available at the Township office for anyone who is not able to access the webpage.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
6	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Council requested to know how residents can find out/determine when work (i.e. tree clearing, widening) on road allowances will commence. Council requested contact information of who landowners may advise and notify of any nuances (e.g. dug wells) regarding their individual properties. Council also requested details on how this type of activity may be reported and if it can be included in the regular update reports to Council.				
<b>OUTCOME</b>				
A map of tree clearing and tree trimming areas has been provided to the Township. Members of the public with questions regarding this activity can contact EDPR through the project webpage or Nation Rise Wind Farm Construction Line at (613) 240-0348. EDPR will provide regular updates of expected construction work on a weekly basis to the Township.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
7	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Council requested the exact location of the wind turbines, information regarding the wells, and the status of the 69 pages of errors and omissions submitted regarding the REA.				
<b>OUTCOME</b>				
The exact locations of the permitted turbine locations can be found listed in the Renewable Energy Approval 0871-AV3TFM which is listed on the project webpage: <a href="http://www.nationrisewindfarm.com">www.nationrisewindfarm.com</a> . As noted during the presentation to council, 28-29 of the 33 permitted locations will be selected for construction, EDPR expects 29 turbines will be constructed. EDPR will release the currently selected locations to the public and will communicate this shortly and will make a current project layout map available on the project website.				
A review of the Renewable Energy Approval Draft Reports was completed by Morrison Hershfield prior to the submission of the REA application. The comments provided by Morrison Hershfield were addressed in the REA Consultation Report which can be found on the project webpage using the address provided earlier in this paragraph.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
8	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
The Township has previously raised questions regarding the lack of resource (wind) in the area and how, considering this, EDPR can push the wind turbines project onto the Township.				
<b>OUTCOME</b>				
EDPR has been measuring the wind regime of the area through two meteorological towers with heights of 60m and 100m respectively. The 60m met tower has been measuring the wind characteristics of the area since its installation in 2012. The company has a strong understanding of the wind regime in the project area and has based its models, and the project's potential on this data. Modelling was a significant part of the project's submission in the Large Renewable Procurement program. Under this program, the Ontario Independent Electric System Operator awarded a 20 year Power Purchase Agreement (PPA) to the 100MW Nation Rise Wind Farm. This awarded contract required that the project site be determined and provide a location of interconnection into the IESO grid. A major determining factor for the selection of this project was due to the capacity for new generation to be accepted on the L24A 230 kV transmission line that runs through the Township of North Stormont.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
9	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Council asked whom the Township can direct daily inquiries to.				
<b>OUTCOME</b>				
The Township can direct enquiries to the project webpage [www.nationrisewindfarm.com], e-mail address [nationrise@edpr.com] or Nation Rise Wind Farm Construction Line at (613) 240-0348.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
10	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Council requested details on how residents can file noise complaints. Council is concerned that the process of a "one time per year" for review is not sufficient. Would also like details regarding the Township "catalogue."				
<b>OUTCOME</b>				
As per Condition W - Record Creation and Retention of Renewable Energy Approval 0871-AV3TFM, the proponent will record any complaint alleging an Adverse Effect caused by the construction, installation, use, operation, maintenance or retirement of the facility. The company shall notify the District Manager in writing of each complaint within two business days of the receipt of the complaint. The company shall also provide the District Manager with the written records created under W1(3) within eight business days of the receipt of the complaint. Further information regarding the requirements by the company when receiving a complaint can be found list in the project's REA which is located on the project webpage.				
Individuals can also contact the Ministry of Environment, Conservation and Parks directly to report a noise complaint. As per the MECP webpage ( <a href="https://www.ontario.ca/page/noise-our-environment">https://www.ontario.ca/page/noise-our-environment</a> ) the individual is directed to contact the local MECP office to report the complaint.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
11	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Council asked if there is a chance of any future wind turbines to be erected in the area.				
<b>OUTCOME</b>				
This is unknown at this time, EDPR does not currently hold any plans for expansion of the Nation Rise Wind Farm in North Stormont.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
12	Township of North Stormont Council	May 14, 2019	May 23, 2019	Concern
<b>DESCRIPTION</b>				
The Township stated concerns about decommissioning costs (and/or water contamination, land values, etc.) and asked how Nation Rise can guarantee the Township of North Stormont, and its residents, that they will have no responsibility/ liability for any default costs within the life of the Project regarding the wind turbines. The Township wished to receive sound written assurances (legal evidence, escrow fund, etc.) that they will not be held responsible for any of these costs.				
<b>OUTCOME</b>				
As per EDPR's presentation to council, EDPR confirmed that decommissioning would not be the responsibility of the township. The development and operation of the turbines are between the project entity and its partner, the landowners. A decommissioning fund is provided in escrow as a requirement in the private lease agreements. In the case a transfer of ownership occurs, the new leaseholder will be required to continue with the stipulations set forth in the lease.

13	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Council asked what happens if the Nation Rise project is cancelled and details on who the responsible parties would be for the costs and clean-up of a half constructed project.				
<b>OUTCOME</b>				
As part of the publicly available form of the IESO Large Renewable Procurement I (LRP I) contract, if the contract were to be terminated by the IESO during the construction of the project mechanisms exist within the agreement for the restoration of the site and any funding required for the decommissioning of the project would be settled as stipulated in the LRP I contract with the IESO.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
14	Township of North Stormont Council	May 14, 2019	May 23, 2019	Enquiry
<b>DESCRIPTION</b>				
Council requested to know if any well water complaints were made with the South Branch Project.				
<b>OUTCOME</b>				
EDPR can confirm that there were no complaints received directly about well water quality during the installation or the operations of the South Branch Wind Farm. Further, EDPR is not aware of the MECP receiving any complaints related to well water quality.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
15	Public Stakeholder	Jun 03, 2019	Jun 28, 2019	Concern
DESCRIPTION				
Stakeholder contacted EDPR with concerns regarding dump trucks speeding along Concession Rd. 6-7.				
OUTCOME				
EDPR has spoken with the Township and the MECP in regards to construction vehicles not following the posted speed limits. Drivers have been informed to follow the posted speed limits on all roads and will continue to ensure these posted speed limits are adhered to.

16	Township of North Stormont Council	May 14, 2019	Jun 28, 2019	Enquiry
DESCRIPTION				
Council inquired about conducting the CLC meetings on a monthly basis.				
OUTCOME				
EDPR consulted with the CLC and has agreed to host a monthly construction update public open house.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
17	Township of North Stormont Council	May 14, 2019	Jun 28, 2019	Concern
DESCRIPTION				
Council asked why EDPR does not have fire suppression in the turbine towers.				
OUTCOME				
EDPR notes that it is unsafe for turbine technicians to have fire suppression located in the turbine towers as it deprives the space of air and if the suppression was to occur, the turbine technicians would be killed if present in the turbine. Turbines are outfitted with fire safety features such as fire alarm mechanisms, sprinklers, and fire extinguishers within the turbine nacelle.

<b>DESCRIPTION</b>				
What are the final turbine numbers and locations? a. Of the locations chosen, what were the key factors in the choice? b. Of the locations dropped, what were the key factors in the choice?				
<b>OUTCOME</b>				
The final turbine model to be installed is the Enercon E138 3.44MW turbine. The final 29 locations have been selected and released to the public via the project webpage. a. Though each turbine location is unique, selected turbine locations were chosen based mostly on engineering and energy assessment factors. b. Dropped locations were due to factors associated with engineering and energy assessment factors.

<b>DESCRIPTION</b>				
Has Nathan Roscoe ever managed a project of this size and complexity before? If so, where?				
<b>OUTCOME</b>				
Nathan Roscoe is a Development Project Manager with EDP Renewables Canada Ltd. He has experience developing solar and wind projects throughout Ontario and western Canada. His initial experience developing wind energy projects occurred at the South Branch project located in Brinston, Ontario. He has since led in the early development of the South Branch II wind energy project, as well as the development of the Nation Rise project following contract award. Nathan has significant experience and knowledge of the Nation Rise project area. It should be noted that the construction of the project will be managed by construction managers with EDP Renewables North America. Wayne Beck, the site manager, has significant experience constructing projects across North America over the past 12 years with the company. Wayne was also the site construction manager at the South Branch wind project. Construction project management will be handled by Andrew Syverson, an accomplished construction manager with significant experience constructing project in the United States.

44	Public Stakeholder	May 31, 2019	Jul 19, 2019	Concern
<b>DESCRIPTION</b>				
Should fire suppression be mandatory if not for all turbines, at least for those adjacent to properties with a disabled or handicapped individual who cannot move away from harm on their own?				
<b>OUTCOME</b>				
In the rare case that a fire is present in the turbine, first responders have been instructed to delineate and contain the fire to the area below the turbine. Automated fire suppression systems are not typically installed in turbines because of the safety risk to workers that may be present in the turbine.				

INTEREST #	STAKEHOLDER	DATE RECEIVED	DATE OF POSTED	TYPE
45	Public Stakeholder	May 31, 2019	Jul 19, 2019	Concern
DESCRIPTION				
Considering that turbines will be located in what can be dry corn fields or grasslands adjacent to rural homes and that fire suppression has safety interlocks when workers are present why is my safety as a neighboring resident not important, all the time?				
OUTCOME				
Safety is a priority to EDPR and all contractors working on the Nation Rise Wind Farm. Fire prevention and response is an integral component of each company's Emergency Response Plan. EDPR, Borea Construction and subcontractors working on the wind farm, will follow the Emergency Response Plan's created for the project.

54	Public Stakeholder	May 31, 2019	Sep 05, 2019	Enquiry
DESCRIPTION				
Do I have any recourse from shadow flicker?				
OUTCOME				
<p>A shadow flicker simulation was completed for the Project and the highest annual duration of shadow flicker predicted at a residence near the Project is 23 hours per year. All but two residences have predicted duration of less than 20 hours per year. These estimates can be considered conservative because they do not consider any obstacles like trees or other buildings placed near residences and assumes that every house has unobstructed windows facing in all directions.</p> <p>According to DNV GL's experience, Ontario noise regulations require setbacks from residences that generally result in lower annual shadow flicker numbers. Ontario's REA regulations do not have a requirement for shadow flicker assessments or exceedance criteria.</p>

56	Public Stakeholder	May 31, 2019	Sep 05, 2019	Enquiry
DESCRIPTION				
How are we addressing potential stray voltage or leakage for the underground electrical collection system?				
OUTCOME				
<p>All electrical works will be installed according to applicable standards and codes, reviewed by professional engineers with a license issued by the Province of Ontario, which includes safety requirements. In order for the Project to be energized, the Project will require an inspection performed by the Ontario Electrical Safety Authority (ESA), and issuance of the ESA certificate of conformity. All the wind farm equipment up to the point of interconnection is effectively grounded and tested. Conducting this work through applicable electrical codes and ESA requirements reduces concerns of stray voltage from the installation of the underground collection cable. However, if stray voltage issues are definitively linked to any faulty electrical equipment from the Project, it will be investigated and resolved as soon as possible.</p> <p>For any stay voltage issues experienced at a home or farm connected to Hydro One's distribution circuits, Hydro One should be the first point of contact as they must investigate any tingle or stray voltage issues associated with their supply to retail customers.</p>

59	Public Stakeholder	May 31, 2019	Sep 05, 2019	Enquiry
DESCRIPTION				
What would be the impact if current noise modelling standards were used instead of the outdated ones from 2008 as grandfathered for Project?				
OUTCOME				
The Project is modelled in accordance with O. Reg. 359/09 and the MOECC Noise Guidelines (2016) for Wind Farms, including consideration of the Transition Rules for LRP I projects (as further described in Section 6 of the draft Noise Impact Assessment available on our website). The Transition Rules for LRP I projects do not alter the allowable sound level limits at noise receptors. Therefore, once operational, the Project must comply with the MOECC's current sound level limits and will be required to complete acoustic audits against the most recent Compliance Protocol.				
The 2016 guidelines have transition rules for LRP I projects that began development prior to the formal issuance of the 2016 guidelines. While the 2016 guidelines offer more conservative modeling requirements, the Proponent has still opted to add an upward adjustment to the turbine sound power level, which will provide additional conservation in modelling. Further the Enercon E-138 NR2 wind turbine has a significantly lower sound power level of 104.3 dBA as the previous acoustically equivalent turbine was modeled at 105.8 dBA.

<b>DESCRIPTION</b>				
Will the turbines have red flashing lights at night?				
<b>OUTCOME</b>				
Turbine lighting will be coordinated based on the regulations set by Transport Canada Part VI - General Operating and Flight Rules - Canadian Aviation Regulations (CARs) 2017 -1: Standard 621 - Obstruction Marking and Lighting - Chapter 12 - Marking and Lighting of Wind Turbines and Wind Farms. Due to changes in the CARs 621 standards mid-tower lighting is a requirement for this project. These lights will appear different from installations at older project lighting, such as at South Branch near Brinston, and will have a greater illumination of the tower steel. The lighting installed on both the nacelle and mid-tower will be directional LED lighting reducing light directed downward.

<b>DESCRIPTION</b>				
What happens to the project after its operation life?				
<b>OUTCOME</b>				
"As part of the REA process, the Proponent will prepare a Decommissioning Plan Report ( <a href="https://nationrisewindfarm.com/">https://nationrisewindfarm.com/</a> ). It provides a plan after ceasing operation and there is a requirement in the Renewable Energy Approval to update it six months prior to the anticipated retirement date. This Decommissioning Plan Report is expected to provide great detail of waste disposal and detailed decommissioning of project components.  The Proponent will ensure the financial assurance of the decommissioning cost prior to the expected end of the project life-cycle, including salvage value of steel and other valuable recyclables. The Project has established the creation of an escrow account for decommissioning costs in private landowner leases.  Further, the MECP will have the rights to enforce decommissioning activities timelines based on the conditions within the REA."

<b>DESCRIPTION</b>				
Where did the 200m notification boundary come from for the soil stabilization? a.Was livestock considered in determining this boundary?				
<b>OUTCOME</b>				
The 200m notification radius was a voluntary radius agreed to by the proponent in discussion with the MECP in requesting notification for residences near the concrete stabilization work. While the 200m was not established with a specific metric, it was intended to be a conservative distance for the propagation of dust as the contractor actively monitored and managed field conditions based on wind and weather conditions to keep dust within this radius. The contractors have explicit direction to ensure dust is not carrying in any excessive distance from the site and to manage the work accordingly with wind conditions to minimize dust onto non-participating properties. a. No, animals were not taken into consideration in this notification as the MECP directed the proponent to notify residences. However, the construction contractor was to operate the process diligently to mitigate dust on any non-participating properties and to monitor for any in-field activity for humans or livestock.

<b>DESCRIPTION</b>				
Why did we choose to use cement stabilized roads instead of traditional roads?				
<b>OUTCOME</b>				
Cement stabilized roads were chosen over traditional roads for many different reasons and benefits. Cement stabilized roads are often easier to construct when constructing over wet soils that are typically low in strength. The cement hydrates with the existing moisture in the soil and bonds the particles together to produce a stronger subgrade. This allows the roads to be constructed efficiently and helps reduce long term maintenance due to potentially weak subgrade conditions. Cement stabilized construction also utilizes far less aggregate and in turn less trucks are required to construct the road. The process of cement stabilized road construction is widely used across North America.
